

AISLER

To strengthen our team, we are currently looking to hire you as a

Mechanical Engineer (f/m/x)

Simple Electronics Manufacturing. This is what AISLER is all about. Today, we cater about 20.000 electrical engineers world-wide every day. We help them realize their prototype project by providing all components for either self-assembly as a kit or we provide them with fully assembled boards. Our customers value our speed, simplicity and cost-efficiency. By using us, our customers can iterate on the product swiftly and bring it to market with ease.

What are we looking for?

If you are interested in mechanical engineering and CAD applications but also want to get an insight into the software engineering don't look further. We got you covered! To support our internal development team we are looking for a Mechanical Engineer and offer either a **HiWi** or **part-time position**.

Your task will be to improve our capabilities in PCB manufacturing. You will learn how to do this by working on our internal CAD tools. By the way, you don't need any knowledge in electrical engineering to do this.

Interested?

Send me an E-Mail
together with your CV
