

AISLER

To strengthen our team, we are currently looking to hire you as a

Software Engineer (w/m/x)

Simple Electronics Manufacturing. This is what AISLER is all about. Today, we cater about 20.000 electrical engineers world-wide every day. We help them realize their prototype project by providing all components for either self-assembly as a kit or we provide them with fully assembled boards. Our customers value our speed, simplicity and cost-efficiency. By using us, our customers can iterate on the product swiftly and bring it to market with ease.

What are we looking for?

As a Software Engineer at AISLER you will work on our internal ERP solution which is responsible of managing orders, dispatch and manufacturing. You work in close contact with our Sales-Team. Jointly with them you specify new requirements and will implement these independently.

We value if you already have experience with Ruby and the Ruby on Rails web framework, additionally you should know how to work with relational databases. And no worry, experience with electronics is not required.

Interested?

Send me an E-Mail
together with your CV
